Import and export .csv files with panda:

First pd.read_csv command used to import file

```
PATH="FDha_1.csv"
df = pd.read_csv(PATH, sep=".", skiprows=[], delimiter=",")   #del
df.to_numpy() #here you can choose export file like excel latex
```

Export data finally
save this form,
here . we can use ,
\n(or space) \t(or tab)

import data read in this
form
here our csv file
separate with ,

skip unnecessary lines

set export file format
to_numpy is used
for .txt file you can
choose excel,latex...

Finally data can be save as text by command below

```
np.savetxt("txt file of raw.txt",df, delimiter="\t")
```

The file

saved file name
Remember to add
.txt

How you you want
to separate save
text file
